C4

C5

ClayTech new C Series integrated water pump has changed the face of domestic pumping. So many new features that other pumps just do not have. The pre-filter is integrated into the pump making it easy to clean without the use of a spanner. The non-return valve is also built into the pump body allowing for easy service without removing any pipework. The auto on/off controller is easily attached to the top of the pump using a unique connector system requiring no threading. The controller electrical cable is cleverly hidden from sight so there are no dangerous cables hanging on the ground. The pump is powered by a revolutionary water cooled motor. This means quieter operation. Also, no air movement is required across the motor for cooling purposes meaning the pump can be located in confined spaces or completely covered, protecting it from the weather. The C Series also has a friendly LED display to view the pressure and operation mode of the pump. Now the C Series is the premium product in the Australian domestic market.

Innovative Design Automatic On/Off

- ① Auto controller with loss of prime protection
- ② Swivel connection with quick release
- ③ Prefilter for easy maintenance
- ④ Integrated easily accessible non-return valve
- ⑤ Water cooled motor; quieter and easier to protect from weather
- ⑥ LED Display
